Research interests

My research focuses on image-based analysis and sensing for agricultural applications, with a particular interest in plant phenotyping. My current work includes hyperspectral assessment of tomato damage and spatial analysis of greenhouse environmental measurements. I also integrate sensors and data acquisition with robotic grippers and quadruped platforms. I aim to use imaging and sensing data to quantify crop traits and study their relationships with growing conditions.

Education

Pusan National University

Mar. 2025 – Feb. 2027 (expected)

M.S. in Bio-Industrial Machinery Engineering · GPA: 4.36/4.50

Pusan National University

Mar. 2017 – Feb. 2025

B.S. in Plant Bioscience · GPA: 4.26/4.50

Minor in Bio-Industrial Machinery Engineering

Summa Cum Laude; President's List.

Research experience

Graduate Researcher

Mar. 2025 – Present

Precision Agriculture and Smart Sensing System Lab., Pusan National University

Damage-aware robotic gripping for tomato harvesting

- Developed Python software for robotic compression experiments and force-signal processing using a myCobot 320 Pi arm, adaptive gripper and force sensor; compared four loading rates (6.9–15.3 N/s).
- Combined force–deformation analysis with hyperspectral measurements at 1 hour and 5 days after compression to study delayed damage; contributed to experimental design, analysis and manuscript preparation as first author.

Quadruped robotics for agricultural sensing

- Contributed to greenhouse microclimate mapping with a Unitree Go2 platform, measuring temperature, relative humidity and CO₂ at two canopy heights across eight lanes to produce 24 spatial maps and assess fixed-sensor representativeness. Co-first author of the greenhouse manuscript.
- Worked on reservoir upstream surveys using RGB imaging and RTK-GNSS to construct location-linked ground-image datasets. Plant phenotyping is a planned extension of the sensing platform.

Uplift resistance of expandable foundation piles

- Used Abaqus/Standard finite-element models to examine how wing inclination and dimensions influence pile uplift resistance in sandy soil; analysed load–displacement behaviour and soil plastic zones.

Load-cell sensing for air-supported domes

- Participated in load-cell installation and field acquisition at Damyang on 15 June 2026, recording cable-tension data through an indicator, USB-to-RS485 interface and Raspberry Pi.

Undergraduate Research Student

Mar. 2024 – May 2025

Functional Crop Laboratory, Pusan National University

- Worked on soybean leaf phenotyping under drought using time-series RGB images, YOLOv8, Roboflow and ImageJ, with Arduino-based environmental measurements.

Publications and manuscripts

Peer-reviewed publication

Research funding

- **Individual research grant:** National Research Foundation of Korea (NRF), funded by the Ministry of Education (MOE). Grant **RS-2025-25438074**.
Development of Locomotion Algorithms and Autonomous Control Systems for Quadruped Robots Specialized for Korean Agricultural Terrain.
- **Quadruped robotics:** National Research Foundation of Korea (NRF), funded by the Ministry of Science and ICT (MSIT). Grant **RS-2026-25475333**.
Development of an Integrated Sensing, Monitoring, and Decision-Making Model for Field Surveys in Agricultural Environments (Open Farmland and Greenhouses) Using a Quadruped Robot.
- **Air-dome foundations and sensing:** Korea Institute of Planning and Evaluation for Technology in Food, Agriculture and Forestry (IPET), through the Agri-Food Export Enhancement Technology Development Program, funded by the Ministry of Agriculture, Food and Rural Affairs (MAFRA). Grant **RS-2025-02313370**.
Development of Commercial-scale Vertical Farming System with Low Energy Consumption Based on Passive Air-dome Technology for Hot Climate in Middle East.

Technical skills

- **Programming and data analysis:** Python, NumPy, pandas and SciPy. Sensor time-series processing, force–deformation analysis, nonlinear model fitting and research visualisation.
- **Robotics and mobile sensing:** ROS 2, Unitree Go2, RTK-GNSS and LiDAR/IMU. Timestamped robot/sensor recording, greenhouse microclimate mapping, and matching ground images to GNSS positions and robot travel routes.
- **Instrumentation and data acquisition:** Force sensors, load cells, Raspberry Pi, Arduino and RS485. Force measurements for robotic compression tests, environmental measurements and field load-cell acquisition with CSV logging.
- **Imaging and plant phenotyping:** RGB and hyperspectral imaging; SAM, YOLOv8, Roboflow and ImageJ. Fruit-region segmentation and spectral comparison; soybean leaf-image analysis under drought stress and location-linked ground-image datasets.
- **Finite-element modelling:** Abaqus/CAE and Abaqus/Standard. Three-dimensional pile–soil contact models, displacement-controlled uplift simulations, geometric parameter studies and soil plastic-zone interpretation.

Selected conference presentations

- **Park, S.,** Park, J., Hwang, H., and Kang, S. (2026). Ground-reaction-force-based lateral slope estimation for furrow-following quadruped robots. *Korean Society for Agricultural Machinery Spring Conference*.
- **Park, S.,** Park, J., Song, J., and Kim, M. (31 October 2025). Analysis of pile pull-out behaviour in Middle Eastern soil using digital image correlation. *Korean Society of Agricultural Engineers Autumn Conference*, Jeju.
- Hwang, H., **Park, S.,** et al. (22 May 2025). Remote control and integrated sensor-data environment for an agricultural quadruped robot. *Korean Society for Precision Agriculture Spring Conference*. Co-author.
- **Park, S.,** Park, J., Park, G., Song, J., and Hwang, H. (25 April 2025). Minimising damage and optimising control in fruit and vegetable harvesting using a robotic arm and gripper with real-time force sensing. *Korean Society for Agricultural Machinery Spring Conference*.

English translations are used for Korean presentation titles.

Honours and awards

- **Best Paper Presentation Award (team)**, Korean Society for Precision Agriculture, May 2025 and November 2024.
- **Excellent Paper Presentation Award**, Korean Society for Agricultural Machinery, April 2025 and October 2024.
- **Excellence Award**, PNU-PKNU Field Problem Research Group Final Symposium, November 2024.
- **Best Presentation Award (team)**, Korean Society for Engineering Education, September 2024.
- **Bronze Prize**, PNU College of Natural Resources and Life Science Capstone Design Competition, October 2023.
- **Excellence Award**, Busan LINC 3.0 Entrepreneurship Shared University Competition, January 2023.
- **PNU merit scholarships**: four full-tuition and two partial-tuition awards, 2017–2024.

Selected coursework

Graduate: Biological Image Processing; Statistical Processing and Data Analysis in Bio-Industrial Machinery Engineering; Advanced Bio-Industrial Machinery Design; Biosystems Mechanics; Advanced Biomaterials Engineering I.

Undergraduate – engineering and sensing: Biosensor and Bio-Instrumentation & Practice; Biosystems Control Engineering; Bio-Production Mechatronics Design; Applied Mechanics of Materials; Bio-Industrial Machine Element Design (I); Food Process Engineering & Practice.

Undergraduate – programming and quantitative methods: Basic Computer Programming; Experimental Design for Biologists; Biostatistics; Calculus (II).

Undergraduate – plant science and cultivation: Plant Physiology and Practice; Plant Genetics; Plant Molecular Biology; Plant Biotechnology; Plant Breeding (I, II); Soil Science; Plant Ecology; Protected Horticulture.

Additional training

Modeling Contact with Abaqus/Standard, VPK PLM Solution Training Center, 25–26 June 2026.

Introduction to Abaqus/CAE, VPK PLM Solution Training Center, 18–20 March 2026.
